Open Storage AG

Data Destruction

Your future depends on protecting your information through Secure Media Destruction

- Why an **Onsite** Shredding Service is more secure than **Offsite.**
- Don't give thieves or your competitors the upper hand. Protect yourself, your company and your customers, and let our **Media Destruction** services safeguard your privacy.
- Our secure process is safer than having confidential materials picked up and transported for **Off site Shredding**, as other companies do.

Through our secure Media Destruction process, we empower your organization, big or small, to protect personal data and the confidential information of your company, your suppliers, and your customers.
We destroy your data right under your eyes in accordance with the prevailing legal guidelines.

CD
DVD
Magnetic tapes
Back-up tapes
Hard drives

We collect your private materials and destroy them on the spot.
The security and privacy of your materials begins the moment they are deposited into your office's Shred-it console.

Materials are shredded in the truck, behind bolted doors
(although you are welcome to witness your confidential data being destroyed).

A certificate of destruction is then issued immediately that confirms the destruction of your confidential materials.
